

Student Registration System Requirement

1.Introduction: An student registration System streamlines the application registration and monitoring of students in a school or university or training institute.

Student Registration System are websites that allow users to sign up for memberships , events and training by completing a form.

1. **Purpose** : The main purpose is also to ensure that all of the Requirements present in this document are catered during the development phase of the System.
2. **Scope** : Without an Online Student Registration System , managing and maintaining the details of the student is a tedious job for any organization Student online registration.

Student online registration system will store all the details of the students including their background information , educational qualifications , personal details and all the information related to their resume .

Edit / Delete Module : Suppose there are hundreds of students and from this we have to edit / search a particular student and we know the name of the student , in manual system it is a tedious task though we know the name of the student , but using this module we can easily edit / delete student by specifying the name of the student in the search criteria

Automated process of examination is much better than the manual system as it has followings advantages :

- Time saving
- > Increased efficiency
- Allows neat handling of data rather than error prone records .

- ▶ Decreases overhead
- Accurate

External Interface Requiremen

1. **Registration Screen : Various fields available on this screen ill be:**
